

# RADS

## Improving Your Form Design & Presentation

<https://github.com/radservice/rad-community/fork>

# Prerequisites

1. Good understanding on the basic functionality of the Form Builder.

# Content

---

1. Introduction
2. Grid
3. Form Grid
4. Multirow Form Binder
5. List Grid
6. CRUD
7. Custom HTML
8. Using Advanced Tool's Permission

A short horizontal bar with a black left half and an orange right half.

# Chapter I

## Introduction

# Introduction

---

- Learning about more RADS plugins/elements to improve your form design and presentation.
- In this module, we will be covering the following elements.
  1. Grid (Form Element)
  2. Form Grid (Form Element)
  3. Multirow Form Binder (Form Binder)
  4. List Grid (Form Element)
  5. CRUD (Userview Menu)
  6. Custom HTML (Form Element)

# List of Available Elements

---

- Check out <https://docs.rads.purwana.net/Form+Builder> for the list of **Form** related elements (Form Element, Form Validator, Form Binder, Form Options Binder).
- Check out <https://docs.rads.purwana.net/Userview+Builder> for the list of **Userview** related elements.

# Chapter 2

## Grid

# Grid

---

- Grid is the most basic element available in the Form Builder in capturing multi-row data.
- Reference: <https://docs.rads.purwana.net/Grid>
- For your information: The other grid-like element available in Form Builder is Form Grid.

# Refresh

- Refresh your memory on what you did back in module 5 - Designing your first Form
- Take a look at your “items” field element

Auto save when close? ☒

**Edit Grid** ?

Edit Grid > UI & Validation > Data Binder

ID \*

Label

<input type="text" value="name"/>	<input type="text" value="Name"/>	⬆️ ⬆️ ⬆️
<input type="text" value="quantity"/>	<input type="text" value="Quantity"/>	⬆️ ⬆️ ⬆️
<input type="text" value="price"/>	<input type="text" value="Price"/>	⬆️ ⬆️ ⬆️

< Prev Next >

OK Cancel

# Just In Case...

---

- You can download the base Purchase Requisition app - **13.jwa** to start 'playing around' with it.
- Completed Form Definition for "1-Submit Request" can be obtained from **13.2.1.txt**.

# Chapter Review

---

- Able to use the Grid element.

# Chapter 3

## Form Grid

# Form Grid

---

- Form Grid works similarly like the basic Grid.
- Instead of editing data row inline, editing is done on a full fledged Form that opens up in a dialog.
- Able to reuse validation and formatting from the selected Form.
- Reference:  
<https://docs.rads.purwana.net/Form+Grid>

# Exercise

- Re-import the base app “**13.jwa**” into your copy of RADS, OR delete the “items” Grid element.
- Create a new Form with the following details.

**CREATE NEW FORM**

**FORM DETAILS**

Form ID	items
Form Name	Items
Table Name	app_fd_ purchase_items

# Exercise

- Add 3 text fields with the following details:-
  - ID: name, Label: Name
  - ID: quantity, Label: Quantity
  - ID: price, Label: Price

The image shows a form titled "Items" with a light gray header. Below the header, there are three text input fields arranged vertically. The first field is labeled "Name" and has a blue border; a tooltip "Drag This Column" is visible above it. The second field is labeled "Quantity" and the third is labeled "Price". Both the second and third fields have a light gray border. The form is enclosed in a dashed border.

- Save the form

# Exercise

- Edit the “1-Submit Request” form.
- Add a “Form Grid” wherever relevant.
- Configure accordingly.

Auto save when close? x

# Exercise

---

- Run a new “Submit New Request” process, and submit the form to observe.

# Materials

---

- "1-Submit Request" form definition can be obtained from **13.3.1.txt**
- "Items" form definition can be obtained from **13.3.2.txt**

# Chapter Review

---

- Being able to use the Form Grid element.
- PS: Check out Advanced Grid  
(<https://docs.rads.purwana.net/Advanced+Grid>) Form Element that performs similarly as Form Grid.

# Chapter 4

## Multirow Form Binder

# Multirow Form Binder

---

- Multirow Form Binder is a Store/Load Form Binder that is designed to treat multi-row data for grid form element.
- Rather than storing as traditional JSON data format in a single column cell, the Multirow Form Binder saves the data into its respective tables.
- This would make data retrieval easier for sorting, statistics, and indexing/performance purpose.
- Reference:  
<https://docs.rads.purwana.net/Multirow+Form+Binder>

# Exercise

- Continue to use the application from the previous chapter OR import app from **13.4.1.jwa**.
- Edit the “Items” form.
- Add a Hidden Field to the form.
- Configure accordingly.

**Edit Hidden Field** ?

Edit Hidden Field > Advanced Options

ID *	<input type="text" value="request_id"/>
Default Value	<input type="text"/>

# Exercise

- This is how your “Items” form should look like.

Items	
	<i>Drag This Column</i>
request_id	<input type="text"/> <span>HIDDEN FIELD</span>
Name	<input type="text"/>
Quantity	<input type="text"/>
Price	<input type="text"/>

# Exercise

- Edit the "1-Submit Request" form.
- Configure the Form Grid element to utilize the Multirow Form Binder in Data Binder.

Validation & Data Binder

Edit Form Grid > UI > **Validation & Data Binder** > Load Binder (Multirow Form Binder) > Store Binder (Multirow Form Binder)

**Validation**

Validator

Unique Column [?](#)

Min Number of Row Validation (Integer)

Max Number of Row Validation (Integer)

Error Message Invalid number of rows

**Data Binder**

Load Binder Multirow Form Binder ✕ ▾

Store Binder Multirow Form Binder ✕ ▾

# Exercise

- Click next to configure the Binder.
- Configure accordingly.

**Configure Multirow Form Binder** ?

Edit Form Grid > UI > Validation & Data Binder > **Configure Multirow Form Binder** > Store Binder (Multirow Form Binder)

Form *	Items	x ▾	↗
Foreign Key *	request_id	x ▾	

**Configure Multirow Form Binder** ?

Edit Form Grid > UI > Validation & Data Binder > Load Binder (Multirow Form Binder) > **Configure Multirow Form Binder**

Form *	Items	x ▾	↗
Foreign Key *	request_id	x ▾	

# Exercise

---

- Run a new “Submit New Request” process, and submit the form to observe.

# Exercise - Optional

- Inspect the database table of “Items”, you will notice that rows of data is now being saved into this table rather than the parent table as JSON.

app_fd_purchase_requests: 1 rows total (approximately)										>> Next	Show all	▼ Sorting	▼ Columns (13/13)	▼ Filter
id	dateCreated	dateModified	createdBy	createdByName	modifiedBy	modifiedByName	c_name	c_request_date	c_items

# Materials

---

- "1-Submit Request" form definition is available at **13.4.2.txt**
- "Items" form definition is available at **13.4.3.txt**
- Complete app is available at **13.4.4.jwa**

# Chapter Review

---

- Understand the use case of the Multirow Form Binder and its benefits.

# Chapter 5

## List Grid

# List Grid

---

- **List Grid** is a grid table that populates its data from a Datalist.
- It behaves similarly like a Grid (Chapter 2) but new rows are added from a specified Datalist instead.
- It also behaves similarly like a Form Grid that allows one to open up a Form for editing.
- Reference: <https://docs.rads.purwana.net/List+Grid>

# Sample Use Case

### Leave Process - Submit Leave

#### Leave Application Details

Name \* Admin Admin

Start Date \*

End Date \*

Reason \*

#### Add Entry

10

<input type="checkbox"/>	name	contact_no
<input type="checkbox"/>	Julia	123
<input type="checkbox"/>	Jude	124

2 items found, displaying all items. 1

#### Emergency Contacts

Contact Name	Contact No
<input type="text"/>	<input type="text"/>

# Chapter Review

---

- Understand the List Grid element and be able to think of use cases of it.
- Able to differentiate Grid, Form Grid, and List Grid.

# Chapter 6

CRUD

# CRUD

---

- CRUD is a Userview Menu allows one to easily achieve the functionality of **C**reate, **R**etrieve, **U**ppdate, and **D**eleete on a data entity.
- In short, manipulate records on a specified table.
- Reference: <https://docs.rads.purwana.net/CRUD>

# What Is Needed For CRUD To run?

---

- A Form entity
- A List of the same data entity as the form
- A Userview

# Refresh

---

- You've already done it! Refresh what you did back in Module 8 - Designing your first Userview
- If you do not have the CRUD for "Request List", ask your colleague how to, or raise hand...

# How CRUD Looks Like...

- This is how the CRUD element would look like in runtime.

The screenshot displays a web application titled "WELCOME TO PURCHASE REQUISITION PORTAL". The left sidebar contains a user profile for "Admin Admin", a "Welcome" message, and a "Purchase Requisition" section with links for "Submit New Request", "Inbox", "List All", and "CRUD". The main content area shows a breadcrumb trail "Home > Purchase Requisition > CRUD". At the top right of the main area, there is a dropdown menu set to "10", a text input field labeled "Approval:", and a "Show" button. Below this is a table with the following columns: "NAME", "REQUEST DATE", "CATEGORY", and "REMARKS". The table contains two rows of data. The first row shows "Admin Admin" with a request date of "12/27/2019" and category "stationery". The second row shows "Admin Admin" with a request date of "12/28/2019" and category "stationery", with a remark "More used this month". Each row has a checkbox in the "NAME" column and "Search" and "Edit" links in the "REMARKS" column. At the bottom right of the table, it says "2 items found, displaying all items." and provides links for "CSV", "Excel", "XML", and "PDF". At the bottom left of the main area, there are "New" and "Delete" buttons.

<input type="checkbox"/>	NAME	REQUEST DATE	CATEGORY	REMARKS
<input type="checkbox"/>	Admin Admin	12/27/2019	stationery	<a href="#">Search</a> <a href="#">Edit</a>
<input type="checkbox"/>	Admin Admin	12/28/2019	stationery	More used this month <a href="#">Search</a> <a href="#">Edit</a>

# Chapter Review

---

- Able to use CRUD and understand the linkages.

# Chapter 7

## Custom HTML

# Custom HTML

**Custom HTML** in Form Builder can be used to achieve advanced form design by putting in any valid -

- **HTML**

E.g: `<b>this text is in bold</b>`

- **JavaScript** (jQuery is supported)

Remember to put in `<script type="text/javascript"></script>` block

- **CSS**

Don't forget to put in `<style type="text/css"></style>` block

Reference: <https://docs.rads.purwana.net/Custom+HTML>

# Exercise - CSS (Optional)

- Customize the look and feel of how the form is rendered by modifying its CSS.
  - Add a **Custom HTML** form element into the bottom of the form.
  - Edit it, add the following code into **Custom HTML** property.

```
<style type="text/css">

.form-cell .label,
.subform-cell .label{
    width: 100%;
}

</style>
```

The screenshot shows a web form titled "Request Details". It contains several input fields: "Name" (with a placeholder "#currentUser.firstName#"), "Request Date \*" (with a date format "MM/DD/YYYY" and a calendar icon), and "Category" (a dropdown menu currently showing "Stationery"). Below these is an "Items" section with a table header containing "Name", "Quantity", and "Price". At the bottom of the form is a "Remarks" text area. A green plus icon is visible next to the "Items" section. At the very bottom right of the form, there is a button labeled "CUSTOM HTML".

# Exercise - Tooltip

- Make use of Advanced Tool's Tooltip to add hints into existing form "Submit Request" using Custom HTML also.

**Request Details**

Name 

Key in your full name

Request Date \*

MM/DD/YYYY 

Category

Stationery ▼

Items

Name	Quantity
<div></div>	
<div>Remarks</div> <div><div></div></div>	

# Exercise - Color Picker (Optional)

- Create a text field “Color Code” with ID “color\_code”
- Create a Custom HTML. Make use of color picker library to turn text field into a color picker.

# Exercise - Color Picker - Materials

---

Do import these JS and CSS libraries into the app's resource from the materials folder:

- `colorPick.min.css`
- `colorPick.min.js`

# Exercise - Color Picker

```
<script src="#appResource.colorPick.min.js#"></script>
<link rel="stylesheet" href="#appResource.colorPick.min.css#">

<script type="text/javascript">
    $(function() {
        initialColor = FormUtil.getField("color_code").val();
        //console.log("initial " + initialColor);
        FormUtil.getField("color_code").colorPick({
            'initialColor' : initialColor,
            'onColorSelected': function() {
                //console.log("The user has selected the color: " + this.color);
                FormUtil.getField("color_code").val(this.color);
                this.element.css({'backgroundColor': this.color, 'color': this.color});
            }
        });
    });
</script>
```

# Chapter 8

## Using Advanced Tool's Permission

# Permission Control

- The Permission in Advanced Tools allows fine grain control up to field level.

**ADVANCED TOOLS**

Tree Viewer | **Permission** | Usages | Table | I18N | Tooltip | Diff Checker | JSON Definition

**+ Add Permission**

**Acknowledge Approval Activity**  
Bean Shell Script

**Submit Request Activity**  
Bean Shell Script

**Approval Activity**  
Bean Shell Script

**Default**  
No Plugin

	AUTHORIZED			UNAUTHORIZED	
Approval Acknowledgement <i>section3</i> Permission: No Plugin	VISIBLE	READONLY	HIDDEN	READONLY	HIDDEN
Request Details <i>section1</i> Permission: No Plugin	VISIBLE	READONLY	HIDDEN	READONLY	HIDDEN
Name <i>name</i>	VISIBLE	READONLY	HIDDEN	READONLY	HIDDEN
Request Date <i>request_date</i>	VISIBLE	READONLY	HIDDEN	READONLY	HIDDEN
Category <i>category</i>	VISIBLE	READONLY	HIDDEN	READONLY	HIDDEN
Items <i>items</i>	VISIBLE	READONLY	HIDDEN	READONLY	HIDDEN
Remarks <i>remarks</i>	VISIBLE	READONLY	HIDDEN	READONLY	HIDDEN
Request Approval <i>section2</i> Permission: No Plugin	VISIBLE	READONLY	HIDDEN	READONLY	HIDDEN
Approval <i>approval</i>	VISIBLE	READONLY	HIDDEN	READONLY	HIDDEN

# Permission Control

- Typically, one would control **based on User Role** most of the time to show/hide fields.

**ADVANCED TOOLS**

Tree Viewer | **Permission** | Usages | Table | 118N | Tooltip

**+ Add Permission**

Role	Script
<b>Approver</b>	Bean Shell Script
<b>Requester</b>	Bean Shell Script
<b>Default</b>	No Plugin

**Approval Acknowledgement** *section3*  
Permission: No Plugin

**Request Details** *section1*  
Permission: No Plugin

**Name** *name*

**Request Date** *request\_date*

**Category** *category*

**Items** *items*

**Remarks** *remarks*

**Request Approval** *section2*  
Permission: No Plugin

**Approval** *approval* Radio

# Permission Control

- If the form is used part of a process flow, it is also possible to exert permission **based on activity**, rather than user role.

# Exercise - Advanced Tool's Permission

- *One Master Form Concept* - Try combining the 3 forms in Purchase Requisition into a single form by using the Form Builder's Advance Tool Permission Tab:
  - 1-Submit Request
  - 2-Approve / Reject Request
  - 3-Acknowledge Approved

The screenshot displays the Form Builder interface. On the left, under the 'FORMS' tab, there is a list of forms: '1-Submit Request', '2-Approve / Reject Request', '3-Acknowledge Approved', and 'Items'. Each form is associated with a table name: 'purchase\_requests' for the first three and 'purchase\_items' for the last. On the right, a preview of the 'Purchase Requisition' form is shown. The form is divided into three main sections, each highlighted with a red box and connected to a permission from the left by a red arrow:

- Approval Acknowledgement** (top section) is linked to the '1-Submit Request' permission.
- Request Details** (middle section) is linked to the '2-Approve / Reject Request' permission. This section includes fields for Name, Request Date, Category, Items, and Remarks.
- Request Approval** (bottom section) is linked to the '3-Acknowledge Approved' permission. This section includes an 'Approval' field with radio buttons for 'Approved' and 'Rejected'.

# Exercise - Advanced Tool's Permission

- The same form will be used in all activities.

# Exercise - Advanced Tool's Permission

- In the Permission tab, we can control on what to show based on current activity.

The screenshot displays the 'ADVANCED TOOLS' interface. On the left, the 'Permission' tab is active, showing a tree view of activities. 'Submit Request Activity' is selected and highlighted with a red box. A red arrow points from this box to the right pane. The right pane shows the configuration for 'Permission (Bean Shell Script)'. The 'Script' field is highlighted with a red box and contains the following code:

```
1 return ("#assignment.activityDefId#".equalsIgnoreCase("submitRequest"));
```

```
return ("#assignment.activityDefId#".equalsIgnoreCase("submitRequest"));
```

# Exercise - Advanced Tool's Permission

---

- Once you are done setting up, try to run through the whole flow and check if the form is showing up correctly as per the activity.

# Materials

---

- Complete app is available at **13.8.1.jwa**

# Module Review

---

1. Introduction
2. Grid
3. Form Grid
4. Multirow Form Binder
5. List Grid
6. CRUD
7. Custom HTML
8. Using Advanced Tool's Permission
